Growth of income per capita is calculated as the difference in the log of net state domestic product per capita (NSDP) per capita over time. 2009 refers to FY 2009-10 and so on. NSDP per capita is in 2004-05 prices and is from the CSO. In all the charts, the percentage change in the social outcome is calculated after taking account of, and removing, the convergence effect. Headcount ratios are from National Planning Commission, Annexure B of the 2009 Expert Group Report Poverty Report and the Table on pg. 45 of the Databook for the Deputy Chairman, Planning Commission. Data for 1993 and 2009 are based on the Tendulkar methodology. Data for Jharkhand, Uttarakhand, and Chhattisgarh are included in their parent states.

Growth of income per capita

Data for 1990 and 2004 are, respectively, from SRS Based Abridged Life Tables 1988-1992 and 2002-2006.
